

# TECHNICAL DATA SHEET

# RASCOflex PU309L (K)

RASCOflex PU309L (K) is a slow-reacting, solvent-free 2-component polyurethane injection resin.

#### USF

RASCOflex PU309L (K) is a slow-reacting polyurethane injection resin for waterproofing and consolidation of dry to water-bearing soft ground, rock, concrete and masonry etc. Its long gel times make it ideal for waterproofing, both above water and underwater. Applications include consolidation and waterproofing of porous concrete, masonry, rock and soft ground as well as structural, waterproof filling of cracks, joints and voids.

# **EN** 1504-5:2004

#### **FEATURES**

- high ground permeation
- long gel time
- foaming of material without water contact
- use of accelerator allows fine adjustment of gel time
- consolidation of loose rock

# **APPROVALS**

- EN1504-5 System 2+: ZA.1b U(D1) W(5) (1/2/3) (5/40)
- REACh-assessed exposure scenarios: water contact, periodic inhalation, application
- REACh-tested raw materials, classed as harmless

# TECHNICAL/PHYSICAL DATA

	A component	B component	A:B mix
Supplied form	liquid	liquid	
Material colour	slightly yellowish	brown	
Container type	canister	canister	
Container size	19,8 ltr/20 kg	19,8 ltr/24,3 kg	
Viscosity (DIN EN ISO 3219)	190 - 250 mPas	180 - 240 mPas	
Density (DIN EN ISO 2811)	1,01 kg/ltr (± 0,04)	1,23 kg/ltr (± 0,04)	
Hazardous goods/ADR	none	none	
Mixing ratio			1:1 (by volume)
Curing time at 25°C			approx. 5:30 min
Foam factor			3 - 5
Flexural tensile strength (DIN EN 196-1)			approx. 50 N/mm²
Compressive strength (DIN EN 12190)			approx. 20 N/mm²
Application temperature	from +5° C to +40° C	•	
Storage/shelf life	6 months in original container, from +10° C to +25° C, in dry conditions		

# **APPLICATION**

The A and B components are supplied in the correct, ready-to-use volumetric proportions. Grouting is performed using an injection pump. The components are separately fed, in the ratio 1:1 by volume, to a static mixer located immediately upstream of the injection point. The mixed components react to form a solid polyurethane resin mass.

# **GENERAL GUIDELINE**

The gel and curing times are temperature-dependent. The reaction between the components is significantly influenced by the ambient, material, ground and groundwater temperatures. A minimum application temperature of +5°C should be observed for the individual components.

The components shall be properly blended into a homogeneous mix. For this purpose, a static mixer of min. 300 mm length should be used. As all RASCOflex PU resins are moisture-sensitive, always ensure that the containers are properly sealed during storage.

As the B component is identical for the various RASCOflex PU309 systems, it does not need to be exchanged when switching systems. Do not use water or aqueous agents to clean the equipment and pumps.

#### **SAFETY NOTICE**

Suitable protective clothing, gloves and goggles shall be worn. An eyewash bottle shall be kept at hand. For further details, please consult safety data sheet.

### **EXPERT REPORTS**

- Impact on groundwater hygiene, Institute of Environmental Hygiene and Environmental Medicine, Gelsenkirchen, Germany
- Compatibility with polymers to DIN EN 12637-3, MFPA Leipzig, Germany
- Test based on "German Federal Guideline for Hygienic Assessment of Organic Materials in Contact with Drinking Water"
