SECTION 8: Exposure controls/personal protection

8.1. Control parameters

Additional advice on limit values

To date, no national critical limit values exist.

8.2. Exposure controls

Appropriate engineering controls

Ensure good ventilation. This can be achieved by a local exhaust ventilation system or a general exhaust ventilation system.

If this is not sufficient to keep concentrations below the occupational exposure limit values (OELs), suitable respiratory protection should be worn.

Only applies if exposure limit values are specified here.

The assessment methods that can be used to check the effectiveness of the protective measures taken include metrological and non-measurable determination methods.

These are described, for example, in EN 14042, TRGS 402 (Germany).

EN 14042 'Workplace atmospheres. Guidelines for the application and use of methods and equipment for the assessment of chemical and biological agents'.

TRGS 402 'Identification and assessment of hazards arising from exposure to hazardous substances - Inhalation exposure'.

Individual protection measures, such as personal protective equipment

Eye/face protection

Wear eye protection/face protection. Safety goggles (EN 166) tight-fitting with side shields, in case of risk of splashes.

Hand protection

When handling with chemical substances, protective gloves must be worn with the CE-label including the four control digits. The quality of the protective gloves resistant to chemicals must be chosen as a function of the specific working place concentration and quantity of hazardous substances. For special purposes, it is recommended to check the resistance to chemicals of the protective gloves mentioned above together with the supplier of these gloves. Chemical-resistant protective gloves (EN ISO 374). If necessary Protective gloves made of butyl (EN ISO 374) Protective gloves made of nitrile (EN ISO 374). Protective gloves made of PVC (EN ISO 374) Hand protection cream recommended.

The breakthrough times determined in accordance with EN 16523-1 were not carried out under practical conditions. A maximum wearing time corresponding to 50% of the breakthrough time is recommended.

Skin protection - Other protective measures:

Protective work clothing (e.g. safety shoes EN ISO 20345, long-sleeved work clothing).

Skin protection

Use of protective clothing.

Respiratory protection

In case of inadequate ventilation wear respiratory protection. Normally not necessary.
